DELIVERING BENEFITS TO EDUCATION

LOWER COST

Lower costs

ESET Remote Administrator running on Linux

PROBLEM

Microsoft Client Access Licenses (CALs) are expensive.

SOLUTION

The ESET Remote Administrator server runs on Linux, so you don't need an MS server. ESET is one of only two vendors to offer such a solution.

BENEFIT

There's no longer any need to pay for CALs for every client that connects when you run ESET Remote Administrator on a Linux sever.

Lower costs

Automation by Agent

PROBLEM

We spend a lot of time on repetitive day-to-day tasks. And our mobile workforce isn't always connected to the corporate network - so how can we control security?

SOLUTION

Automation by Agent: All tasks are run by an independent agent directly on the endpoint, even without connectivity to ESET Remote Administrator. Results (logs) are then synchronized upon connection.

BENEFIT

IT administrators' day-to-day tasks are minimized, saving time and allowing them to focus on more important or sophisticated tasks.

Lower costs

ESET License Administrator

PROBLEM

Our IT budget is constantly scrutinized, and costs need to be attributed accurately. But it's difficult to keep track of how many licenses we are using or if we are paying for too many.

SOLUTION

ESET License Administrator. Our new licensing administrator handles all licenses transparently, in one place – from where you can merge, delegate and manage them centrally, in real-time.

BENEFIT

You get the most out of your licenses, with no seat wasted. Your IT department can plan and manage resources better.

Lower costs

Built-in Data Access Protection

PROBLEM

We need to manage online and offline data access but dedicated tools are expensive, need additional management, and increase endpoint hardware demands.

SOLUTION

Built-in Data Access Protection. ESET Endpoint Security comes with built-in Anti-Phishing, Device Control, Web Control, Firewall and other functionalities to cover these security demands.

BENEFIT

No need to pay for and maintain dedicated tools, or upgrade your hardware to cope with them.

Lower costs

Virtualization Support

PROBLEM

We are virtualizing our network and are afraid of AV storms and the overall performance of anti-malware solutions on virtual machines (VMs).

SOLUTION

Virtualization Support: ESET Shared Local Cache prevents scanning of the same files on all VMs. Moreover, an agentless solution is available for platforms supporting such an approach.

BENEFIT

Your VMs run faster because ESET's anti-malware solution won't slow them down. There's no need to upgrade your hardware to offset degraded VM performance when running ESET.

OUTSTANDING USABILITY

Outstanding usability

RIP & Replace

PROBLEM

Migrating from one anti-malware vendor to another demands a lot of time, effort and IT resource – it's easier not to switch.

SOLUTION

RIP & Replace: ESET Endpoint solutions now uninstall all redundant anti-malware software during their installation, and endpoints are deployed pre-set up.

BENEFIT

Migration to ESET is seamless – RIP & Replace makes the process easy.

Outstanding usability

User-friendly Management Console

PROBLEM

We need a “look & see” security overview that is easily accessible, while retaining full management of IT security.

SOLUTION

Our new web-console combines extremely user-friendly interface and data visualization with drill-down capabilities, and was developed based on in-depth consultation with IT professionals.

BENEFIT

Straightforward IT security management via a simple yet powerful web-console, which is completely intuitive to use and accessible from anywhere.

Outstanding usability

ESET License Administrator

PROBLEM

It's difficult to manage licenses dynamically in response to changes in our network. Our IT budget is constantly scrutinized and we need a way to demonstrate spending on licenses is effective.

SOLUTION

ESET License Administrator. Our new licensing administrator handles all licenses transparently, in one place – from where you can merge, delegate and manage them centrally, in real-time.

BENEFIT

License handling made easy – manage your licenses centrally, in real-time.

Outstanding usability

Customizable GUI visibility

PROBLEM

Users can see security alerts and are being distracted by anti-malware information pop-ups or icon tray changes. We don't want users to know about every possible security issue we may be facing.

SOLUTION

Customizable GUI visibility. With ESET you can customize the visibility of notifications, warnings, tray icons, etc. on endpoints – or hide them completely, leaving no process for GUI running at all.

BENEFIT

Users aren't distracted by anti-malware, and may not even know there is any on their endpoint, while having no GUI means even lower system demands.

Outstanding usability

Low System Demands

PROBLEM

IT security solutions slow down our computers and our people too, leading to complaints from users.

SOLUTION

ESET is famous for its low demands on systems. All our products are optimized to ensure high-speed running, as confirmed by independent testing.

BENEFIT

Your computers don't run slower – and nor do your people. The result: no more user complaints.
