DELIVERING BENEFITS TO HEALTHCARE

ENSURE COMPLIANCE

Ensure compliance

Built-in Data Access Protection

PROBLEM

We need to comply with laws and regulations that require us to protect data online and offline, and to secure access to that data.

SOLUTION

Use ESET's Built-in Data Access Protection. ESET Endpoint Security comes with built-in Anti-Phishing, Device Control, Web Control, Firewall and other functionalities that cover all these security demands.

BENEFIT

ESET Endpoint Security ensures that you comply with the current requirements for inbound/outbound communication, and secures your data access whether it's online or offline.

Ensure compliance

Two-factor Authentication

PROBLEM

We work with sensitive, private customer information and need to be sure that only authorized users can access it. We also need to comply with regulations requiring two-factor authentication.

SOLUTION

ESET Secure Authentication, our mobile-based two-factor, one-time password (2FA OTP) solution, is easy to deploy, and can be set up in just 10 minutes.

BENEFIT

Adds an ultra-secure level of data access and meets industry regulations (e.g. PCI-DSS/HIPAA), for accessing sensitive data by 2FA.

Ensure compliance

Encryption

PROBLEM

We work with sensitive, private customer information that for legal reasons needs to be encrypted, but we still need to use and share it flexibly within our company.

SOLUTION

ESET's encryption solution is easy to deploy and manage, and is scalable according to your needs.

BENEFIT

Meets standards for sensitive and private data handling (e.g. ICO, SOX, EU DPD…), but still allows that data to be shared among authorized users.

Ensure compliance

Effective Reporting

PROBLEM

Our regulatory authorities require special security reports, for specific compliance purposes. We spend a lot of time and money creating these reports manually. We also don't want to show unrelated data.

SOLUTION

Reporting: This ESET function generates hassle-free security audits to comply with the requirements of regulatory authorities.

BENEFIT

No-hassle security audits that comply with the compliance requirements of your regulatory authorities.

LOWER COST

Lower costs

RIP & Replace

PROBLEM

Migrating from one anti-malware vendor to another demands a lot of time, effort and IT resources – it's easier not to switch.

SOLUTION

RIP & Replace. ESET Endpoint solutions now uninstall all redundant anti-malware software during their installation, and endpoints are deployed pre-set up.

BENEFIT

Migration to ESET is seamless, and requires minimal time and resources.

Lower costs

Automation by Agent

PROBLEM

We spend a lot of time on repetitive day-to-day tasks. And our mobile workforce isn't always connected to the corporate network - so how can we control security?

SOLUTION

Automation by Agent: All tasks are run by an independent agent directly on the endpoint, even without connectivity to ESET Remote Administrator. Results (logs) are then synchronized upon connection.

BENEFIT

IT administrators' day-to-day tasks are minimized, saving time and allowing them to focus on more important or sophisticated tasks.

Lower costs

Virtualization Support

PROBLEM

We are virtualizing our network and are afraid of AV storms and the overall performance of anti-malware solutions on virtual machines (VMs).

SOLUTION

Virtualization Support: ESET Shared Local Cache prevents scanning of the same files on all VMs. Moreover, an agentless solution is available for platforms supporting such an approach.

BENEFIT

Your VMs run faster because ESET's anti-malware solution won't slow them down. There's no need to upgrade your hardware to offset degraded VM performance when running ESET.

Lower costs

ESET License Administrator

PROBLEM

Our IT budget is constantly scrutinized, and costs need to be attributed accurately. But it's difficult to keep track of how many licenses we are using or if we are paying for too many.

SOLUTION

ESET License Administrator. Our new licensing administrator handles all licenses transparently, in one place – from where you can merge, delegate and manage them centrally, in real-time.

BENEFIT

You get the most out of your licenses, with no seat wasted. Your IT department can plan and manage resources better.

Lower costs

ESET Remote Administrator running on Linux

PROBLEM

Microsoft Client Access Licenses (CALs) are expensive.

SOLUTION

The ESET Remote Administrator server runs on Linux, so you don't need an MS server. ESET is one of only two vendors to offer such a solution.

BENEFIT

There's no longer any need to pay for CALs for every client that connects when you run ESET Remote Administrator on a Linux sever.

Lower costs

Proxy Servers for Remote Administration

PROBLEM

Getting security logs and data from distant locations takes time and resources. Syncing the data into one database causes problems with data integrity, which demands yet more resources.

SOLUTION

Proxy servers. No need to install multiple ESET Remote Administrator servers as proxy servers gather and forward the logs you need to aggregate security events and threat intelligence for your company.

BENEFIT

Saves money by only using the number of servers you really need, and by improving data flow and reducing admin workload.

MOBILE CAPABILITIES

Mobile capabilities

Built-in Data Access Protection

PROBLEM

We need to manage mobile workforce data access (to websites, connections, offline devices) – and stricter rules than for in-house users.

SOLUTION

Built-in Data Access Protection: ESET Endpoint Security comes with built-in Anti-Phishing, Device Control, Web Control, Firewall and other functionalities to cover these security demands.

BENEFIT

Your mobile workforce's online and offline communications and data stay safe all the time, even when outside your company network.

Mobile capabilities

Two-factor Authentication

PROBLEM

We need to be sure that only authorized users can access our systems remotely.

SOLUTION

ESET Secure Authentication, our mobile-based two-factor, one-time password (2FA OTP) solution, is easy to deploy, and can be set up in just 10 minutes.

BENEFIT

Only authorized users are able to access sensitive data.

Mobile capabilities

Encryption

PROBLEM

Our mobile workforce sends and receives sensitive data. What if the data were to fall into the wrong hands, or if a laptop were lost or stolen?

SOLUTION

Encryption: ESET features an easy to deploy and manage encryption solution, which is scalable according to your needs.

BENEFIT

ESET encryption keeps company data secure even if they fall into the wrong hands.

Mobile capabilities

Mobile Devices Secured

PROBLEM

Our mobile workforce uses company mobiles, but they must remain malware-free. We also need to retain control if they go missing, and enforce company policies for apps.

SOLUTION

ESET Endpoint Security for Android allows your admins to stay in control of all your devices without any need for a dedicated mobile device management tool, using ESET Remote Administrator.

BENEFIT

Keep control of your devices, protect them from loss, and shield the data they hold - immediately.
